**Bibliographische Daten**

Film soap is produced with water-soluble polymer as film forming agent, negative and non-ionic surfactant, complexed iodic salt as disinfectant, skin nourishing agent and filler. Material is produced into the film soap of certain thickness through mixing, dissolving in water at certain temp, film forming, drying, film taking and cutting. With the functions of disinfection and nourishing skin, the disposable film soap is esp suitable for use in trip, hotel, restaurant, hospital and other places.
